3D. Dedication, Design & Development

3D RACING IS A SMALL  
CUSTOM FRAME BUILDER  
OWNED AND OPERATED BY  
CHRIS AND LEEANN HERTING.  
CHRIS HAS OVER 10 YEARS  
OF ROAD AND MOUNTAIN  
BIKE RACING AND FRAME  
BUILDING BACKGROUND. HE  
UTILIZES THIS KNOWLEDGE  
AND EXPERIENCE TO CREATE  
THE BEST RACING BIKES ON  
THE PLANET.

EVERY 3D FRAME IS FINISHED WITH AN ELECTRO STATIC EPOXY  
POWDER-COATING IN YOUR CHOICE OF COLORS.

Like the Rover XC, this rear suspended frame is constructed using Easton's 7005 Pro Gram Butted tubes. The S-2 uses a slightly elevated swing arm pivot, pivoting chainstay link and a 3-point rocker plate mounted to Marzocchi's gold medal winning shock. This frame achieves a non-biopacing ride with active suspension under braking. Plus, a well-triangulated tail for superior lateral stiffness under hard cornering. All this translates to 2 inches of adjustable, active rear suspension to handle even the most radical trail.

This frame is for the serious enthusiast. Constructed from Easton's top of the line 7005-Pro Gram butted tubeset, it's light, responsive and durable. Race-proven, aggressive geometry is utilized in this frame and the chromoly version.

### 3D RACING MOUNTAIN BIKE - ROVER XC

### 3D RACING ROAD BIKE

Built with the same precision craftsmanship as the other 3D Racing machines, this frame is built with the hardcore roadie in mind. Each frame is custom made to customers dimensions using Easton's new 7005 Road Kit.
